

+ TANAGER OPEN DATA COMPETITION FAQ

Participation and Eligibility

Can I participate if I am not a resident of the United States?

Yes, the competition is open to individuals and teams globally, provided they are at least 18 years old (or the age of majority in their jurisdiction) and meet standard compliance requirements. See the [competition rules](#) for more information.

Are Planet employees or their families eligible to enter?

No. Current Planet employees, former employees from the past 12 months, and their immediate family or household members are not eligible to participate.

Do I need to be affiliated with an academic institution to participate?

No, all submissions that meet eligibility requirements outlined in the [Competition Terms and Conditions](#) will be accepted.

Do I need a university or employer's permission to join?

Participants are responsible for ensuring their participation complies with the policies of their respective employer or academic institution.

Can I work on a team?

Competition entrants can be individuals or teams.

Data and Technical Requirements

Which data am I required to use for my submission?

All submissions must utilize Tanager imagery specifically from Planet's Open STAC catalog (<https://www.planet.com/data/stac/browser/>).

Can I use data from other satellites alongside Tanager data?

Yes. While you must use Tanager imagery, you are also encouraged to include technical assessments that compare Tanager's performance to other hyperspectral sensors like EMIT or PRISMA, provided you have the appropriate license to do so.

Am I allowed to use third-party tools or code?

Yes, you may use third-party libraries, SDKs, and APIs, provided they are used legally and you have the necessary licenses to distribute them as part of your submission.

Submission and Intellectual Property

In what language must my submission be?

All submission materials must be provided in English.

How will my project be evaluated?

Submissions are scored on a 100-point scale across four categories: Scientific Integrity and Innovation (30 pts), Environmental Application or Use Case (30 pts), Workflow or Tool Development (20 pts), and Visualization and Storytelling (20 pts). See the competition rules for more information.

How will Planet use my submission after the contest?

By entering, you grant Planet a royalty-free, perpetual license to feature or describe your submission for promotional purposes, such as in advertisements, press releases, or trade shows.

Will Planet take ownership of the underlying IP?

No. Each participant shall retain ownership of their submitted work, including all original code, models, and methodologies. By participating, Planet receives a license to analyze the submission for the purposes of the competition, and to publicize the submission. Except this license, Planet receives no rights to a participant's underlying IP.

What should I include in my submission?

We are prioritizing innovation over a specific structure to encourage participation. Suggested formats include:

- Short technical memos or project summaries (less than 4 pages)
- Well-annotated Jupyter Notebooks or GitHub repositories
- Slide decks, infographics, or storymaps
- Brief video walkthroughs (under 5 minutes)

Do all elements of my submission need to be open sourced or submitted?

No. We encourage, but do not require, open sourcing code, data, or other relevant materials that may be useful to the broader community and including those in your submission materials.

Does the work need to be published or journal ready?

No. We are looking for functional demonstrations. Think of it as a prototype that shows what is possible with Tanager.

How do I submit my project?

Persons and teams must first register online via the [Competition website](#). You will then be sent a welcome email including a link to submit your details and materials.

The Award

What exactly do the winners receive?

As a winner, you'll work directly with Planet to help select up to ten Tanager images for release into Planet's Open STAC catalog, ensuring the data that aligns to the winner's research interest becomes a public reality. Winners work will also be recognized by Planet at the AGU26 Annual Meeting, and may be featured in advertisements and other marketing materials.
